## Overview

**Wi-Fi device access has become an absolute requirement in today's homes and businesses.** Smartphones, tablets, streaming devices, and Wi-Fi-enabled smart-home devices are placing a tremendous strain on the home network. In addition, the emergence of Gigabit broadband offerings have exposed Wi-Fi as a potential bottleneck for delivering advertised speeds down to the device. This is requiring service providers to rethink how they deliver residential connectivity over a wireless network as they look to minimize operational costs while ensuring higher customer satisfaction.

The ADTRAN 452 SFU Outdoor ONT is designed to address the residential market with industry-leading voice, data, and video capabilities. With the ADTRAN 452 SFU Outdoor ONT, carriers can benefit from the high data rates afforded by fiber-optic transmission and the flexibility offered by ADTRAN's portfolio of Ethernet-based systems that can be easily configured for new, customized service offerings.

The ADTRAN 452 SFU Outdoor ONT leverages the industry-leading converged voice and data functionality widely deployed in ADTRAN integrated access, IP gateway, and Voice over IP (VoIP) platforms, with millions of ports current-

ly deployed. Based on the ADTRAN Operating System (AOS), each ONT provides unmatched Session Initiation Protocol (SIP) and Media Gateway Control Protocol (MGCP) interoperability with a host of major softswitch vendors, and integrated statistics and tools that allow carriers to quickly and easily troubleshoot network configuration issues, and monitor performance.

Features of the ADTRAN 452 SFU Outdoor ONT include box-in-box, weatherproof and access controlled construction with entry ports for fiber, power, ground, Ethernet, and telephone. Data services are delivered over 10/100/1000Base-T Ethernet interfaces. Telephone service is supported by POTS interfaces.

### SDN Enabled

ADTRAN is defining next-generation service provider networks that revolve around programmability and virtualized network functions. Taking datacenter principles like Software Defined Networking (SDN) and Network Function Virtualization (NFV) and applying them to the service providers' network are going to be a necessity to compete against the threat of cloud solution providers. ADTRAN is enabling this capability in current and next-generation FTTH platforms so service providers are prepared when they need to take the next step in their network.
