## Overview

ADTRAN® is building a next-generation platform for smart home services with Wi-Fi 6. Service Delivery Gateways (SDGs) allow more devices to connect and stream simultaneously, without impacting speed or reliability. This is achieved by scheduling multiple streams at once and efficiently packing and scheduling data.

### The Solution

These ADTRAN mesh wireless devices act predominantly as whole home Wi-Fi extenders, but can also operate as wireless gateways, supporting Wi-Fi 6 (802.11ax), the latest Wi-Fi standard with four times the data capacity to handle growing home network needs.

### Enhanced Multiuser HDTV Quality over Wireless

The ADTRAN mesh wireless residential gateways include built-in tri-band 802.11ax radios. The tri-band radio implementation comes with OFDMA and MU-MIMO to deliver wired-equivalent performance, supporting full 4K UHD video.

To take greater advantage of the Wi-Fi 6 multi-gigabit speeds, the Wi-Fi 6 variants of the ADTRAN SDGs support 2.5GE copper uplinks.

### Smarter, Consistent Whole Home Wi-Fi

These ADTRAN mesh wireless devices increase capacity and effective throughput in the home by forming a smart, self-organizing, adaptable network. This ensures consistent coverage anywhere in the home, office, or in outdoor spaces.

### OpenSync Integrated

These devices include OpenSync integration, a cloud-agnostic, open-source software for delivery, curation, and management of services for the smart home.

### A Better Look for Better Performance

The device location within the home is the most important indicator of Wi-Fi performance. Getting the best signal means not placing it in a corner, closet, or in a shelving unit behind a glass picture frame. The ADTRAN SDG Series gateways and access points offer an elegant, modern design supported by multiple mounting options enabling them to blend into a home's décor.
