

ADTRAN Technical Solutions Professional for Virtual Wireless LAN (ATSP/vWLAN) Course

(Virtual Instructor-led)

Part Number: 1600NVBSWL

This course is designed for those students who are seeking the ADTRAN Technical Solutions Professional for Virtual Wireless LAN (ATSP/vWLAN) certification. The course will guide the student through system planning, design, installation, testing and use of ADTRAN Virtual Wireless LAN products.

This is a live, web-based version of our classroom course; we will deliver the lecture in three 4 hour sessions. Lab exercises will be used to reinforce the concepts that will be covered during the lectures. Each student will be provided access to ADTRAN equipment via the access to our remote training lab. An optional exam prep session is also available to each student.

This training is aimed at establishing a broad set of core skills that will enable the student to successfully apply these skills in a wide range of customer application environments. With successful completion of this course and passing the certification exam, you will be deemed an ADTRAN Technical Support Professional for vWLAN (ATSP/vWLAN).

To enroll, go to www.adtranuniversity.com.

Course Content

- vWLAN Overview and Initial Configuration
